

hello all + anonymous ibex!

all present

1. Announcement from ESF chairs (east side festival); elections coming soon for this year's chairs!
  - a. Conjoined event between the east side dorms = east campus and random and their alumni = of east campus, random, bexley, senior haus
  - b. We invite alumni to come back and visit
  - c. What do ESF chairs do?
    - i. Talk to admin to figure out what exactly we are allowed to do.
  - d. We are starting the planning process earlier (as recommended by DSL + Housing)! Let's get this on people's radars.
  - e. ESF is the first weekend in May.
2. Majority voting on the following:
  - a. Tap access for contractors not affiliated with MIT
  - b. Shibboleth for MIT residents - this means a commitment to knowing it!
  - c. Getting rid of Munroe stairwell buzz-in entry.
3. Some [shibboleth] opinionating ensues:
  - a. The shibboleth is problematic because ghosts won't know it.
  - b. How would you respond to someone not knowing?
  - c. Not very secure.

Shibboleth failed to pass, 0-10.

4. Contractor card opinionating:
  - a. Whose job would it be to get the card back?
  - b. Can we make sure they give the cards back?
    - i. Do an exchange?
  - c. Just deactivate missing cards.
  - d. Copying the cards is a serious crime.
  - e. Is this already a thing?
    - i. Ask Joe G?

Contractor card passes, 9-1.

5. Munroe opinionating:
  - a. Buzz-ins get used for deliveries and packages as well
  - b. The idea: you have to walk through Talbot / by Desk instead of just sneaking in sneakily
  - c. Current desk workers say: about two people per hour during the middle, one person per evening shift buzzes in.
  - d. Making a security desk is another problem.
  - e. Psychological factor of walking past people.
  - f. If something happens, at least someone has (more likely) seen the intruder?
    - i. But eyewitness accounts are \*suboptimal
  - g. Most intruders don't come in through Desk?

Munroe buzz-in removal passes, 8-2.

6. Pinpad logistics (oh yeah!)
  - a. Different halls different codes = confusion and limiting of inter-hall travels.
    - i. But you can still use tap access.
  - b. Changing it often makes it for residents like they don't have pincodes (defeats the point)
  - c. Random keycode purchasing link:  
<https://www.gokeyless.com/product/keyincode-kic5510/>
  - d. Scramble which doors require tap access/door locking by allowing halls to decide.
  - e. Pincode spreading? -- > You can, if you're in a stairwell, get into any hall.
  - f. Still more secure than nothing.
  - g. Neville Longbottom syndrome? (someone writes down all 10 codes... Sirius Black gets in)
  - h. Someone got in from the fire escape ??
  - i. Focus on keeping out intruders who **don't** know East Campus.
  - j. If you email Desk with a general description, they will already not open the door for this person.
7. General consensus: one six digit code to rule them all! + This is something that we can change.
8. Referendum notes:
  - a. Will probably be somewhere in the realm of ranked choice voting/ instant runoff / single transferable etc.
  - b. Also, phrase the question such that you know that there will be keypad/pinpad locks in Bemis/Hayden, they just wouldn't be on.
9. Having Keith Moser (the head of MIT's security operations) + Rich Hilton (= Keith Moser's boss) come by to speak
  - a. Make sure MIT knows we reserve the power to take them away.
  - b. Would this affect East Campus' decision?
    - i. Yep
  - c. Have a process (formalized) for de-activation.
10. Back in the day, we used to have real keys on real doors with real locks and real people with real feelings.
